## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-5, 8-13, 16, and 17 are rejected under 35 U.S.C. 102(b) as being anticipated by Jenkins, US Patent 2,920,914. A lock is provided for overlapping parallel sliding members 10 and 12. As seen in figures 1, 2, 4, and 5, a hinge type construction is shown which includes two leaves (18, 58) and 14, one being fixed to one of the sliding members, the other being free to rotate between locked and unlocked positions, as claimed. A resistance mechanism is provided including cam members 57 on leaf (18, 58) engaging follower element 24. The cam having a flatten lobe corresponding to the locked position and a flatten lobe corresponding to the unlocked position. The resistance mechanism provides resistance in both rotational directions as the pivot leave is pivoted about 90 degrees to a locked position. The follower is of a deformable, elastic material.

***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 6, 7, 14, 15, 18, and 19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Jenkins. It would have been obvious to one having ordinary skill in the art at the time the invention was made to have the cam located on the fixed leaf and the follower on the raised central portion of the pivotal leaf, since it has been held that rearranging parts of an invention involves only routine skill in the art. *In re Japikse*, 86 USPQ 70.

***Conclusion***

This action is non-final.
